DIGITAL FORENSIC

FTK Imager (Exterro)

LAB WORK

PREPARED BY:

Abdul Hariz Mohd Sarnudin (CBS24070208)

About

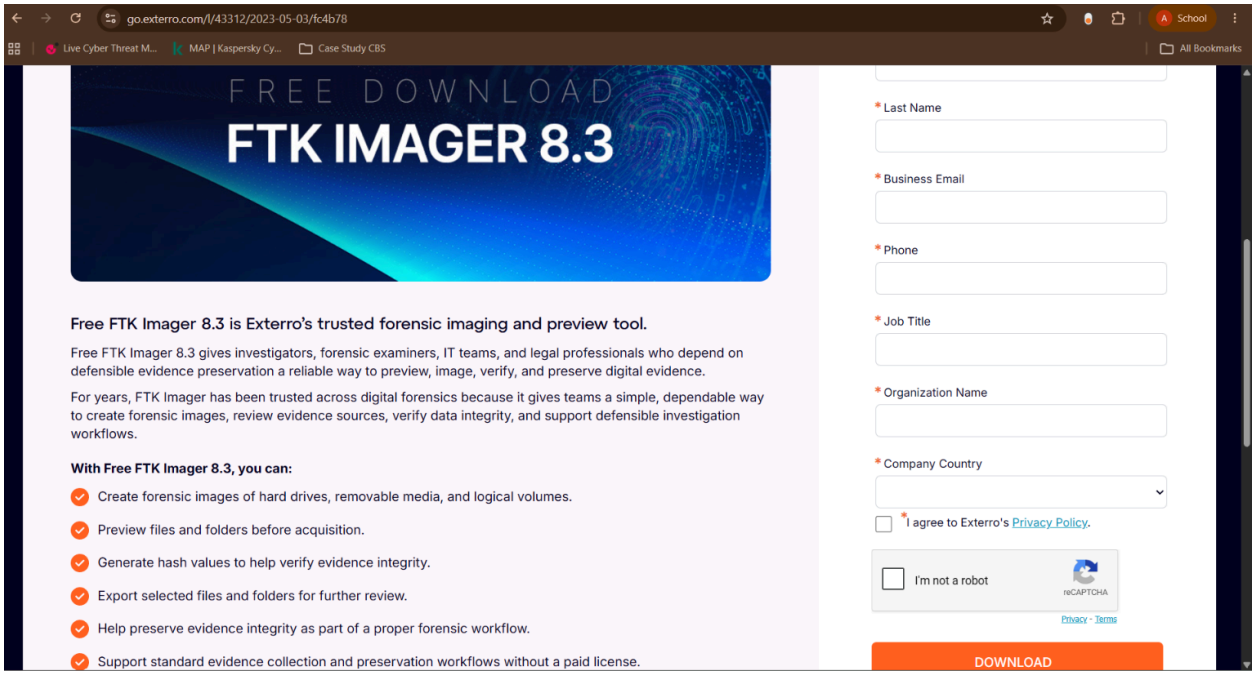

Free FTK Imager 8.3 gives investigators, forensic examiners, IT teams, and legal professionals who depend on defensible evidence preservation a reliable way to preview, image, verify, and preserve digital evidence.

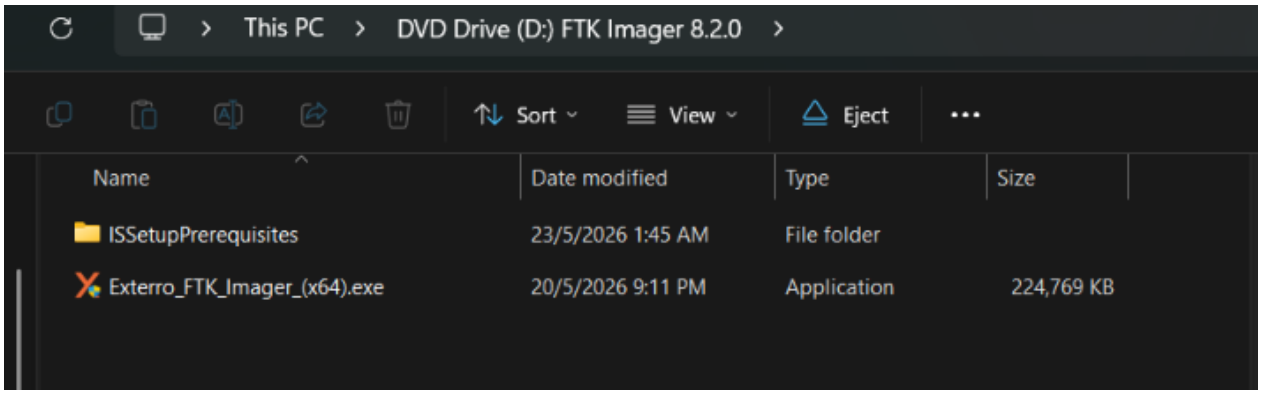

For years, FTK Imager has been trusted across digital forensics because it gives teams a simple, dependable way to create forensic images, review evidence sources, verify data integrity, and support defensible investigation workflows.

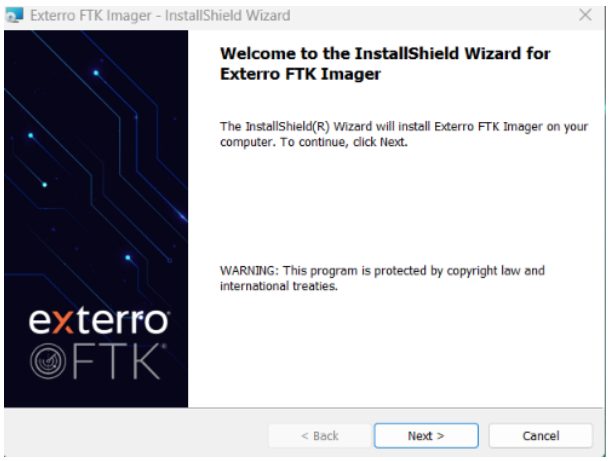

Installation

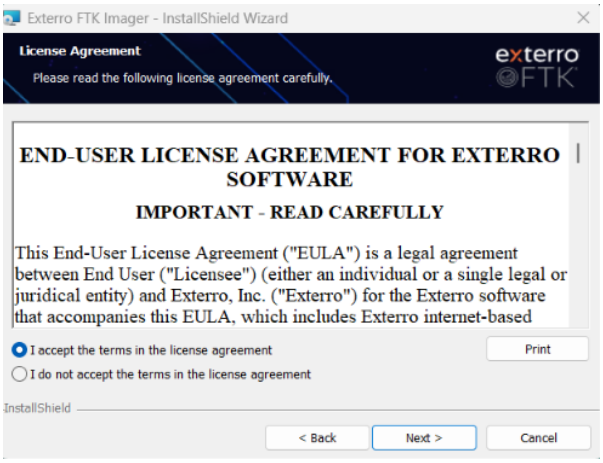

Download and install the FTK Imager from their official website.

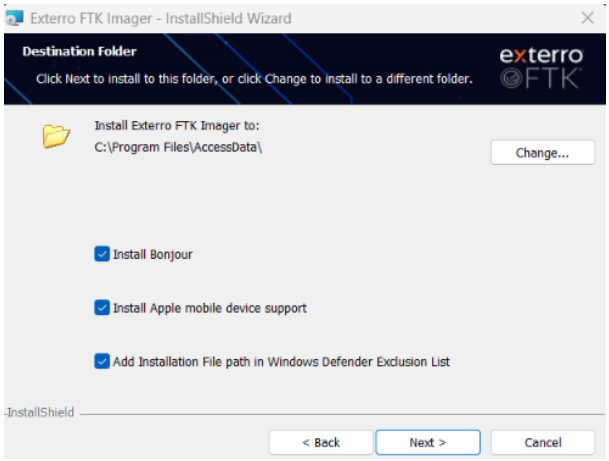

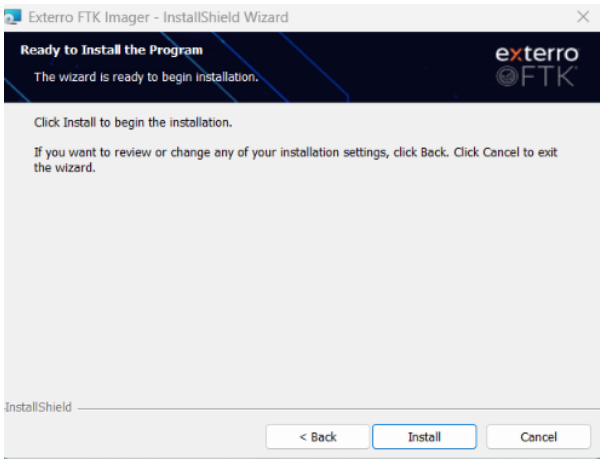

Run the installation process using the installation wizard by clicking the exe file.

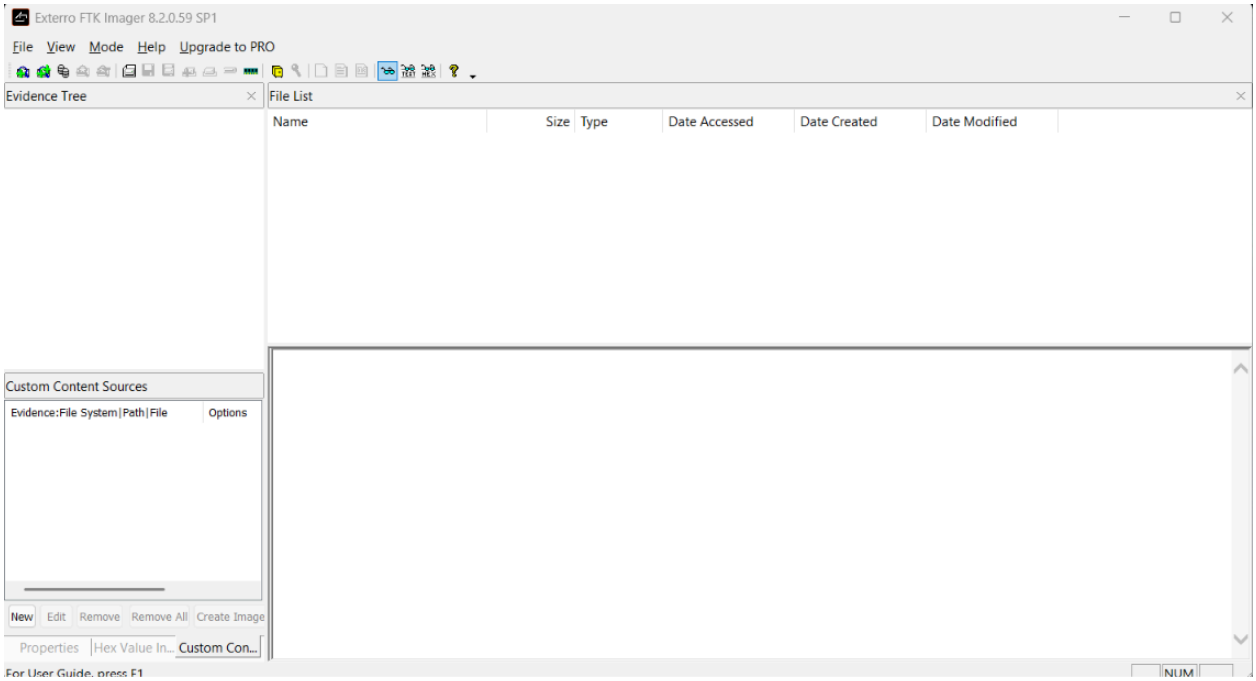

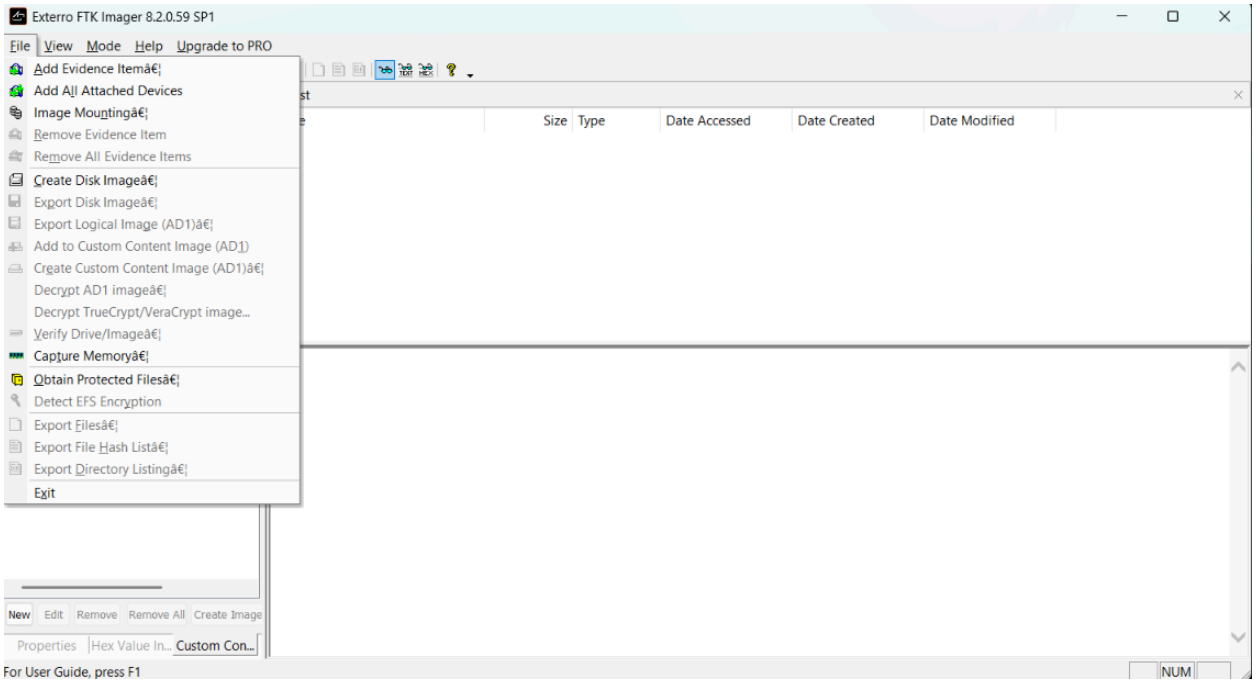

Creating New Image

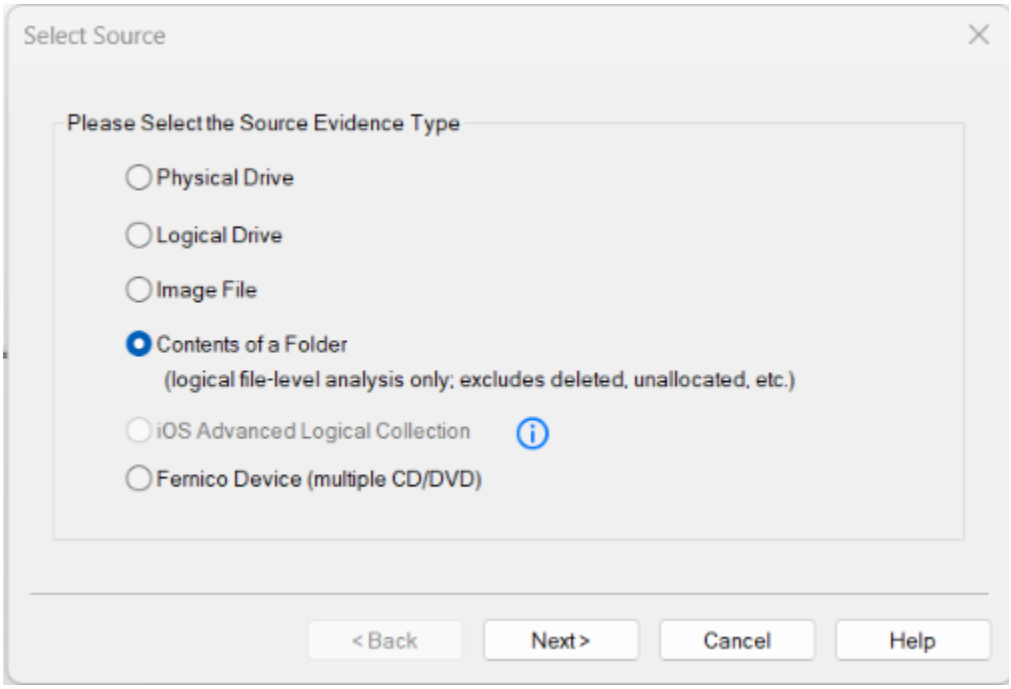

Once the installation process had finished. It will pop up the main interface.

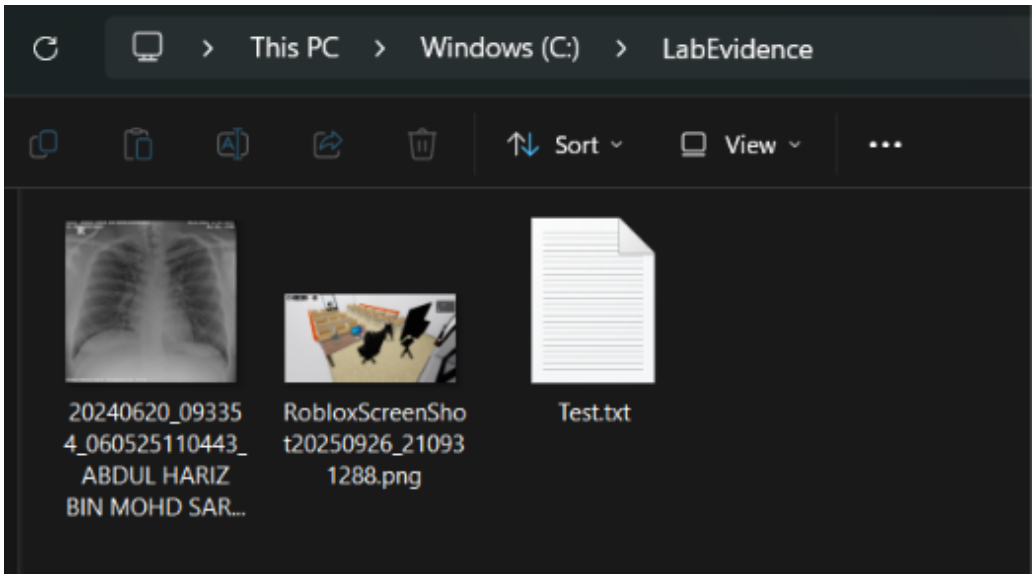

To create an image just simply click “File” on the top left corner, and click “Create Disk Image”.

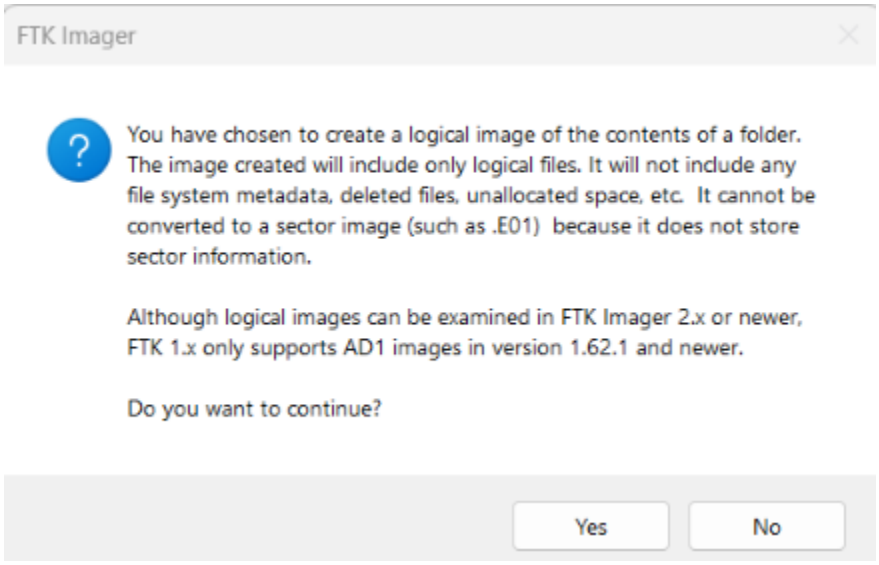

I’m using “Content of a Folder” because I’m copying a folder to an image file. If you are copying a thumb drive or any physical drives, just simply click “Physical Drive” and to copy a partition click “Logical Drive”.

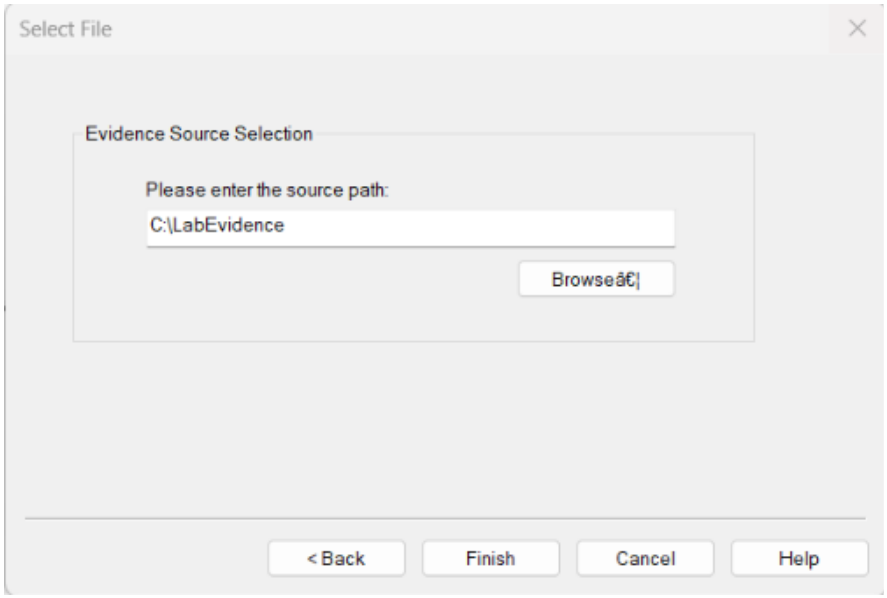

I’ve made a folder beforehand for this labwork. You can paste any file into the folder.

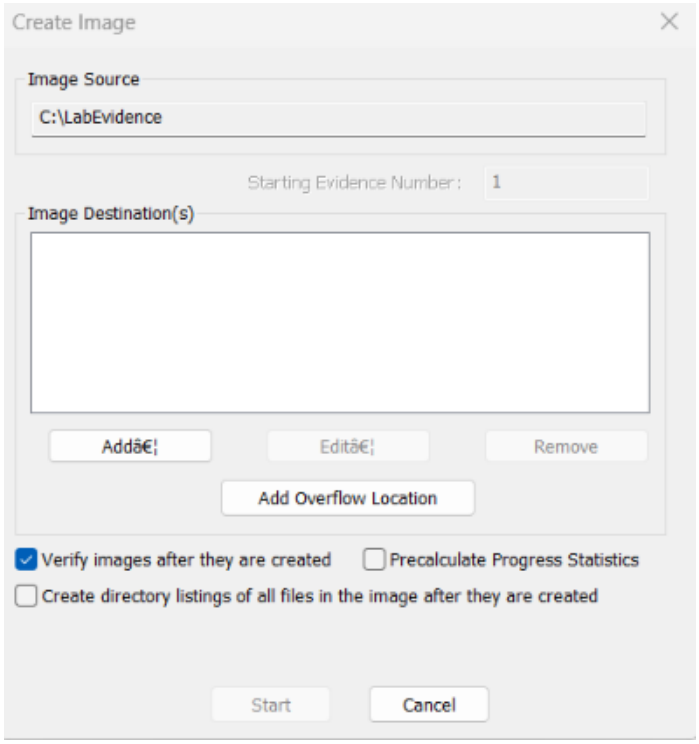

If prompted with this screen, just click “Yes”.

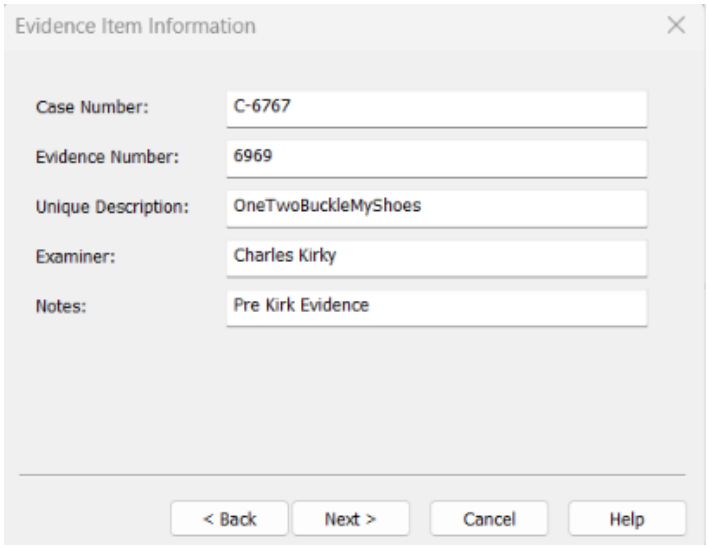

And select the dedicated folder that you want to copy as image.

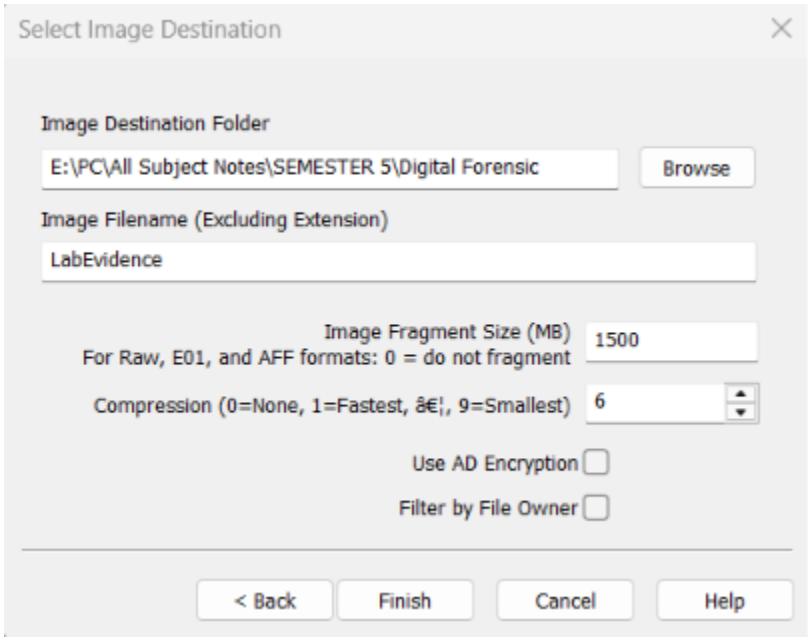

Once you click “Finish”, an interface for creating the image will pop up. To create an image from the folder, click “Add”.

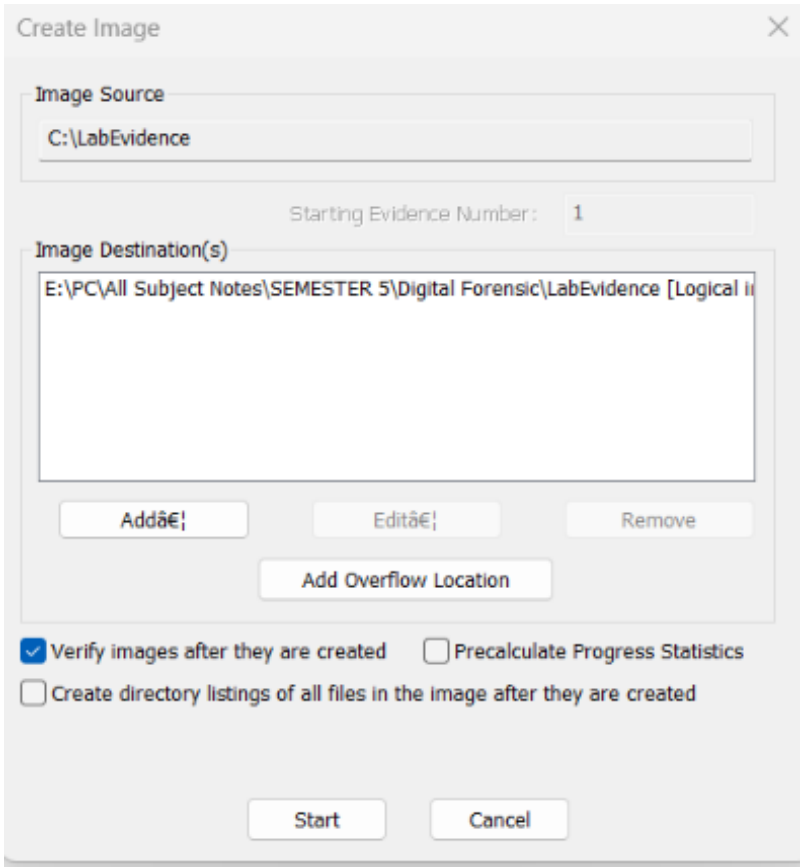

Just fill in the details for the image.

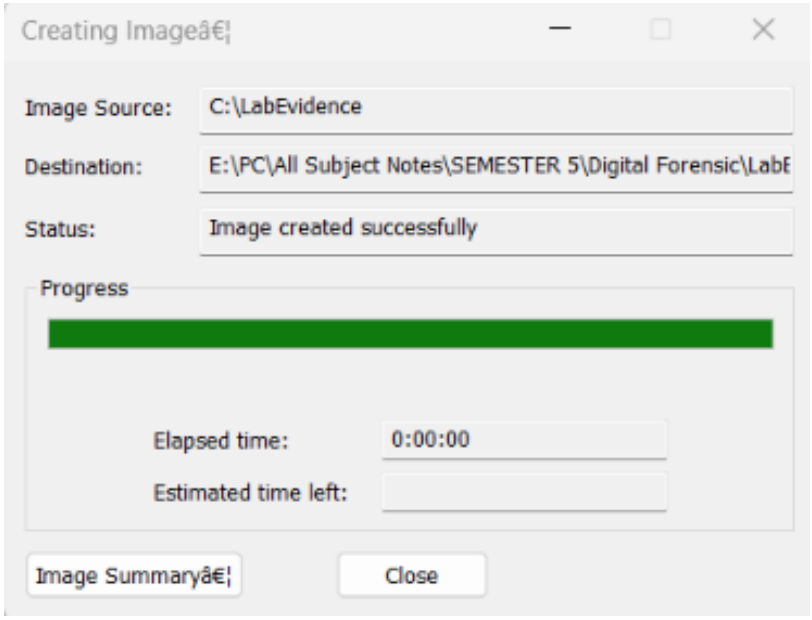

Select your destination folder. Enter image filename, and click “Finish”.

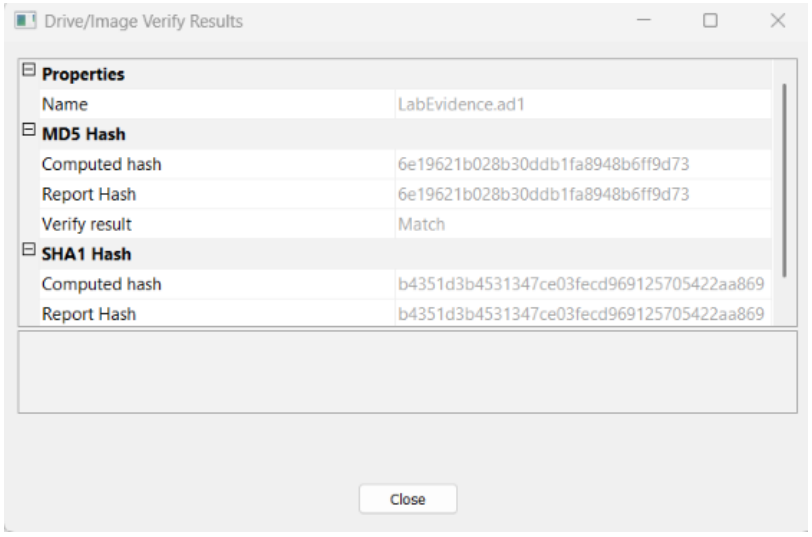

Once an image destination box has a file path in it, proceed by clicking “Start”.

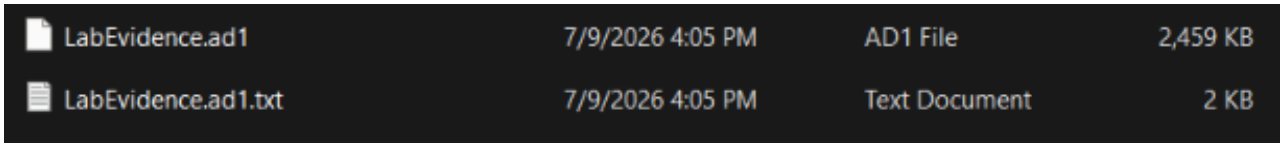

After the loading screen has finished, it will pop up a verified result marking the image has been created successfully.

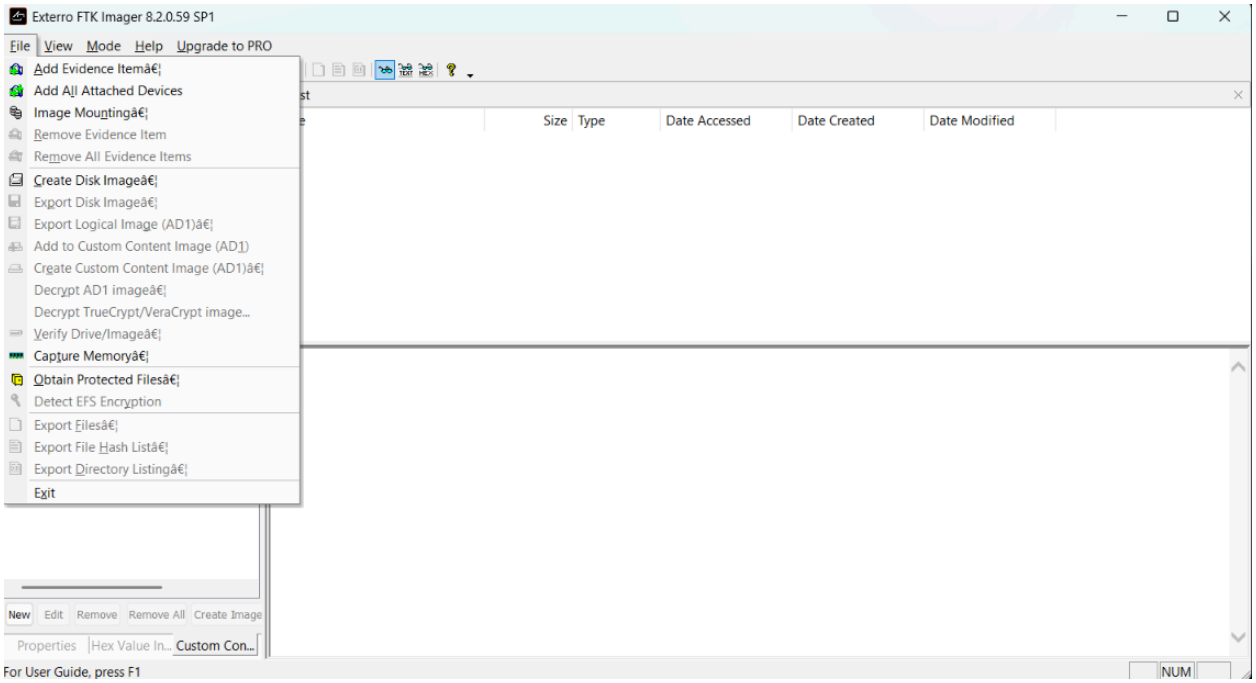

The image file has been successfully created.

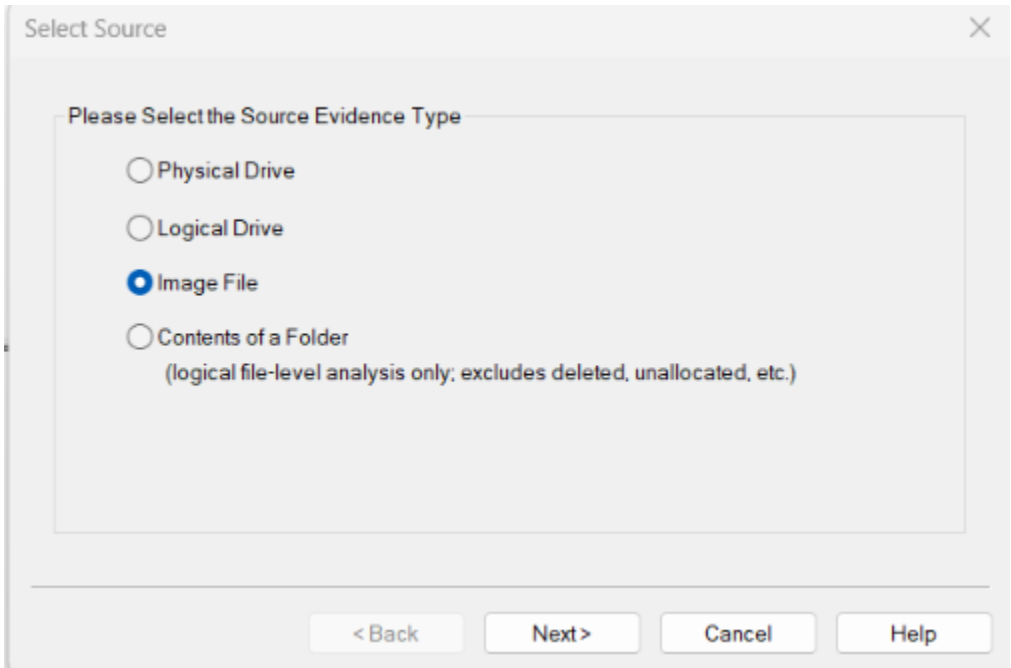

Viewing an image file

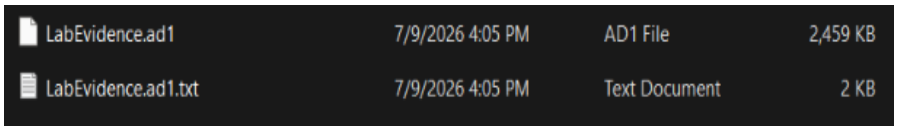

To view the created image file, click “Add Evidence Items”.

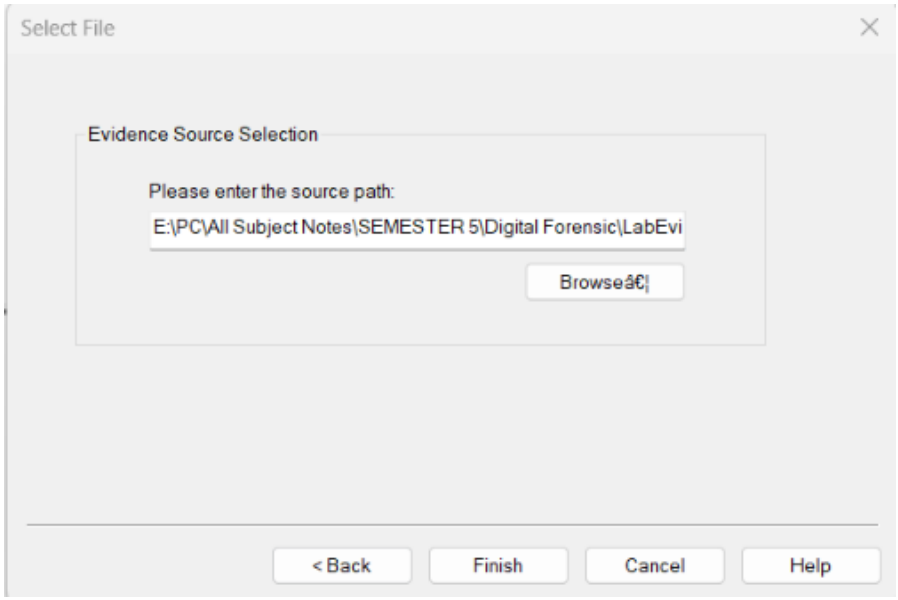

Choose the source evidence type as image file since we are going to view the created image file.

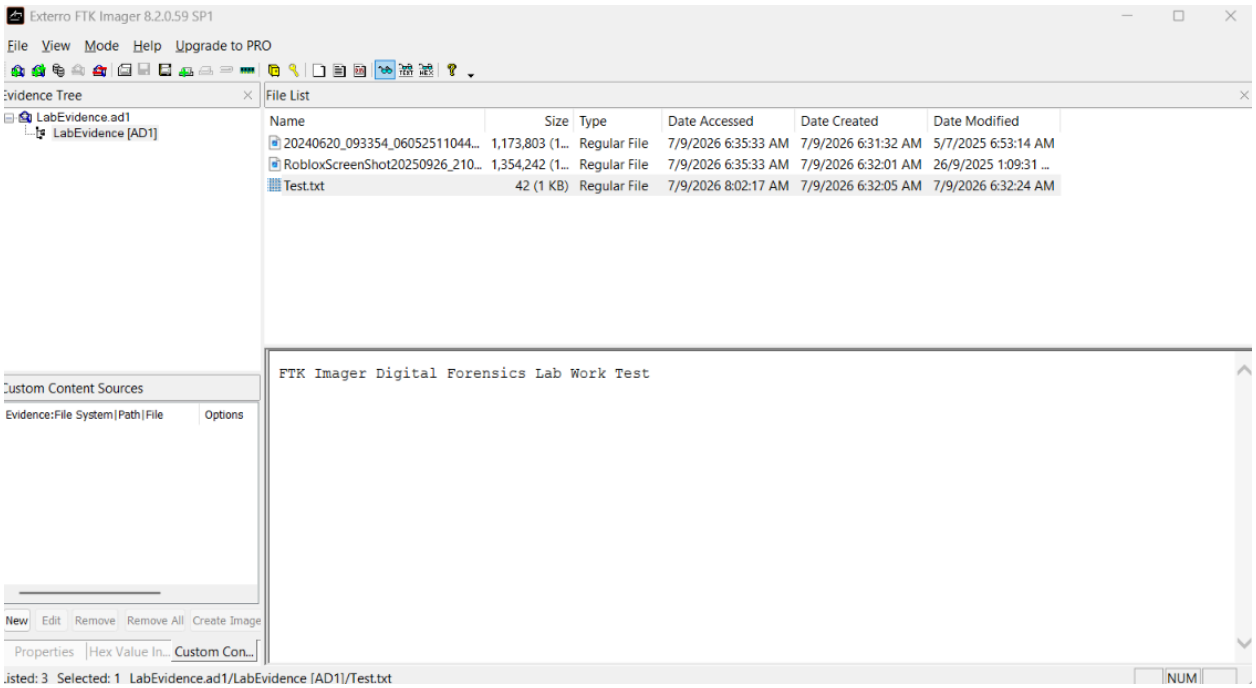

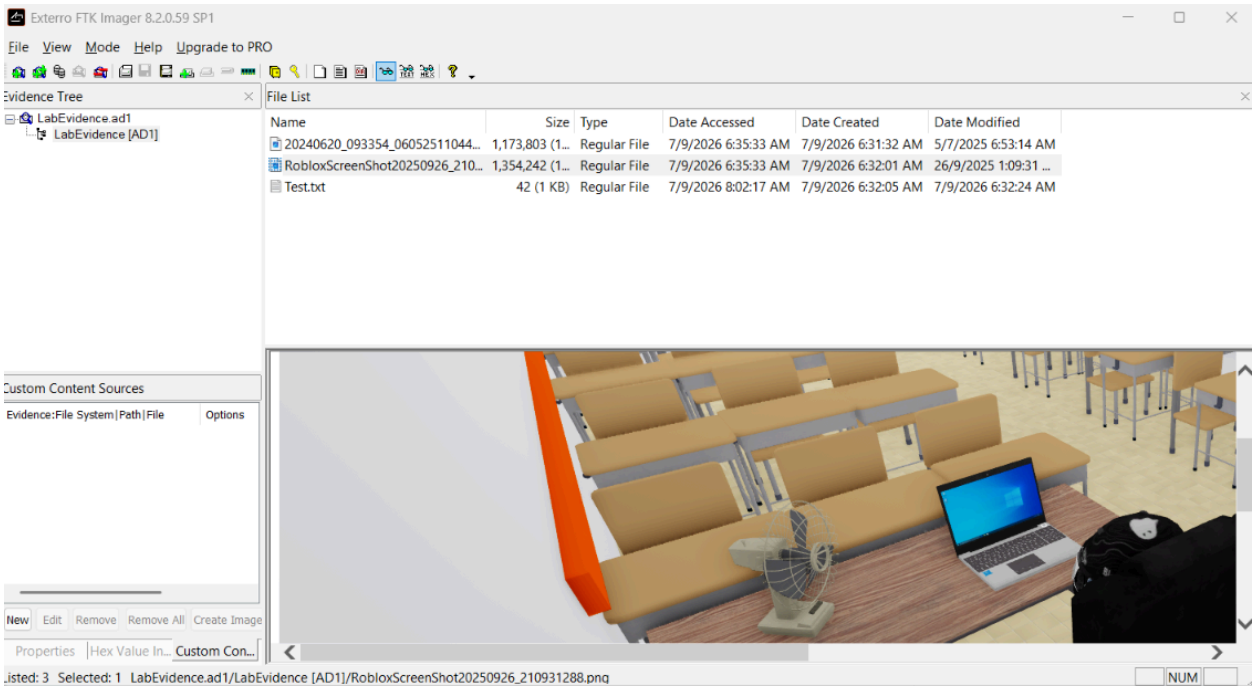

Once it asks for a destination file, click the previous image file we created. And click “Finish”.

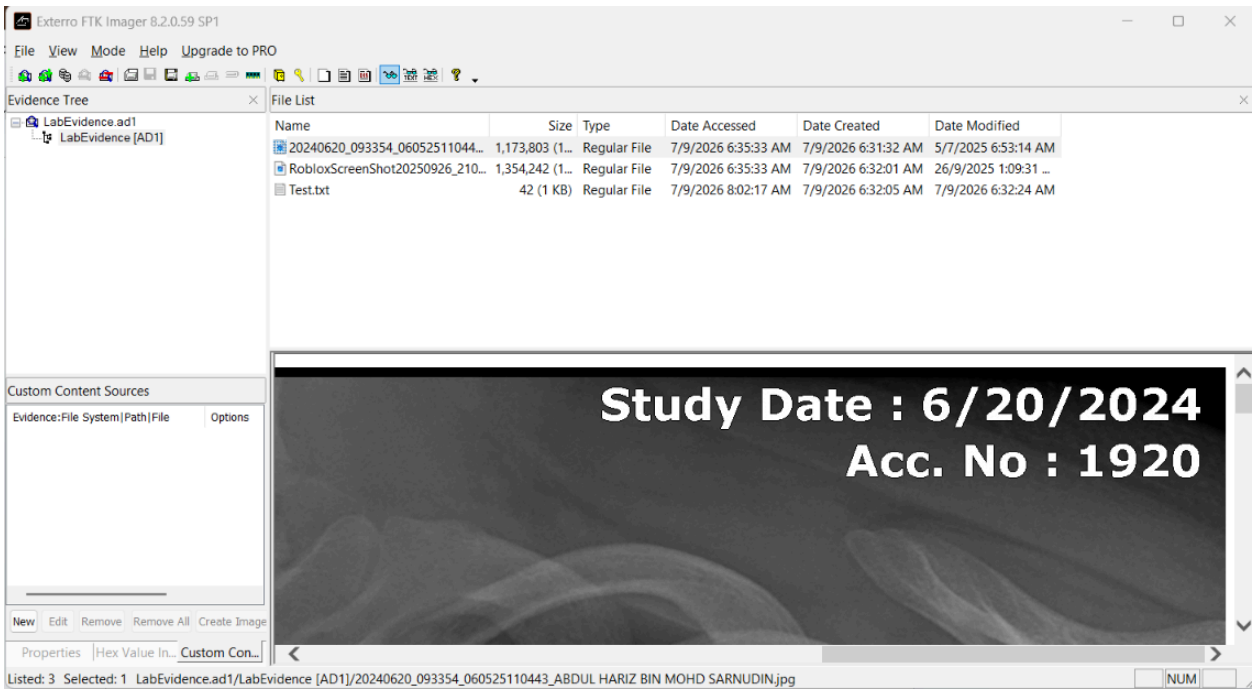

Once it open up the image file, all the files that are copied from the folder will be visible and can be open/preview inside Exterro FTK Imager.
